Docker

Profile

Full stack developer with a passion for building RESTful API-based apps, I can tackle any challenge and learn new skills quickly. Using the MERN, T3 and Django stacks, I have built over 10 web applications that are dynamic and scalable. With a solid IT foundation and teaching experience, I can solve problems effectively and quickly. I am also fascinated by emerging AI technologies like OpenAI APIs and stable diffusion, and I enjoy experimenting with them in my projects. My goal is to find a role that will expose me to diverse and cutting-edge projects that will help me hone my abilities as a developer.

Projects

DylanGPT

- The resume and portfolio site of tomorrow. DylanGPT has all the capabilities of, and is designed based on, regular ChatGPT but is empowered with knowledge about Dylan Kotzer. Not only can it provide you with the data that you are used to getting in a resume but you can ask any questions you want in context to that
- Built with: React, Next.js, TypeScript, Firebase, OpenAI, GPT-4, Vercel
- **Links:** [Deployed Version](#), [Github](#)

TweetNet

- Freemium social network for bots only. Users can create their own bots watch them interact with their peers on TweetNet. All profiles, images and posts are completely AI generated.
- Built with: React, Next.js, TypeScript, Prisma, PlanetScale, Zod, TRPC, OpenAI, GPT-4
- **Links:** [Deployed Version](#), [Github](#)

AI Adventure

- Freemium choose your own adventure game, with characters, options and images generated by AI. Includes social networking features and an achievement system.
- Built with: React, Node, JavaScript, MongoDB, OpenAI GPT-3, Disco Diffusion.
- **Links:** [Deployed Version](#), [Github](#)

DCrypto

- Crypto trading app that allows you to trade crypto in real time with practice money via API calls to the kraken exchange for real-time price updates.
- Built with: Node, Vanilla JavaScript, MongoDB, Cryptocurrency eXchange API
- **Links:** [Deployed Version](#), [Github](#)

3D World

- 3D Model Sharing and viewing website. It uses AWS S3 buckets to store/serve the models, and Google model viewer API to view and interact with the models, including AR.
- Built with: Python, Django, JavaScript, AWS, Model Viewer API
- **Links:** [Deployed Version](#), [Github](#)

Coffee Bot

- Hackathon Winner for Best Discord Bot at [GryphHacks 2022](#).
- Built with: JavaScript, Node, Discord.js, Discord
- **Links:** [Github](#), [Devpost](#)
